PROJECT REPORT

Task #07 – Prototyping Model

SMART WATER MONITORING APPLICATION

Course: Critical Thinking, Design Thinking,
Leadership and Teamwork

SUBMITTED BY

Name : Traver Dera

Roll No. : 2K25MEUN01171

Semester : 2

INSTITUTION

Manav Rachna University

IN COLLABORATION WITH

LARSEN & TOUBRO

SUBMISSION DATE

1. Introduction

This project focuses on designing a prototype for a **Smart Water Monitoring Application** using **Figma**. The goal of the application is to help users monitor the quality of water in real time and ensure safety for consumption.

The prototype demonstrates how modern technology can be used to solve real-life problems such as water contamination, lack of awareness, and delayed alerts.

2. Problem Statement

Access to safe drinking water is a major challenge in many areas. Users often lack:

- Real-time water quality information
- Immediate alerts for unsafe water
- Easy-to-understand data

This creates health risks and reduces trust in water sources.

3. Objective

The objective of this project is to design a **user-friendly mobile application prototype** that:

- Monitors water quality parameters
- Displays real-time data
- Alerts users when water is unsafe
- Provides a simple and intuitive interface

4. Tool Used

- **Figma** – Used to design and prototype the application screens

5. Prototype Description

The application consists of the following main screens:

a) Login Screen

- Users enter email and password
- Simple and clean interface
- Secure access to the application

b) Dashboard Screen

- Displays water status (Safe/Unsafe)
- Shows key parameter: **pH level (7.2)**
- Navigation buttons:
 - View Details
 - Alerts

c) Details Screen

- Displays detailed water parameters:
 - pH level
 - Turbidity
 - Temperature
- Helps users understand water quality clearly

d) Alert Screen

- Displays warning when water is unsafe
- Message: *“Do not drink this water”*
- Simple and direct communication

6. Features of the Application

- Real-time water monitoring
- Easy-to-read interface
- Instant safety alerts
- Minimal and user-friendly design
- Quick navigation between screens

7. Design Thinking Approach Used

The prototype follows key stages of design thinking:

- **Empathy:** Understanding user need for safe water
- **Define:** Identifying lack of water quality awareness
- **Ideate:** Creating a smart monitoring solution
- **Prototype:** Designing app screens in Figma
- **Test (Future Scope):** User feedback and improvements

8. Advantages

- Improves health safety
- Saves time with instant updates
- Easy to use for all age groups
- Provides actionable insights

9. Limitations

- Prototype only (not connected to real sensors)
- Requires internet connectivity
- No backend integration yet

10. Future Scope

- Integration with IoT water sensors
- AI-based water quality prediction
- Notifications via SMS/email
- Data history and analytics dashboard

11. Conclusion

The Smart Water Monitoring App prototype demonstrates how technology can be used to address real-world problems effectively. The application provides a simple yet powerful solution for monitoring water quality and ensuring user safety.

This project highlights the importance of **design thinking and prototyping** in developing practical and impactful digital solutions.
